 Faculty of Economics,
University of Novi Sad –
Master's degree
October 2020 - October 2021

LANGUAGES

English - B2/C1 level
 German - currently learning

HOBBIES

Basketball
 Cars
 Formula 1
 Technology
 DIY

PROJECTS

Aždaja doo — company website

When I learned HTML and CSS, my first project was creating a website for my dad's company. It was a simple website tailored to his specific needs, incorporating all the essential functions required for the business

Golobe — travel agency website

In my second project, I came across a captivating design for a booking website on Figma. I decided to recreate the website from scratch. Although the design lacked a mobile version, I successfully replicated the layout and functionality for the desktop version. It's worth noting that this project is frontend-focused, and no backend or server-side functionality is implemented.

Todoro — to-do web app

After gaining proficiency in JavaScript, I set out to test my skills by designing a web app using Figma. The web app is a comprehensive tool featuring a to-do list, calendar, and finance tracker. Users can log their finances, manage tasks, and stay organized.

While the project's core functionalities are in place, I'm currently working on adding a backend and database functionality. Once completed, this app will offer enhanced usability and data storage capabilities. Furthermore, I have plans to continually update and expand the app with new features in the future.
